

# New Maybridge building blocks

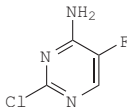

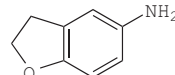

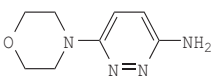

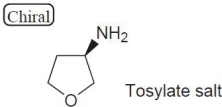

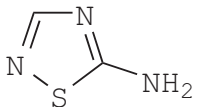

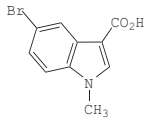

Issue 2 - 2015

The availability of diverse and pharmacophorically relevant synthetic building blocks remains a critical success factor in the drug design process. Where key building blocks are not commercially available, in-house synthesis consumes vital time and can add considerable cost to the project.

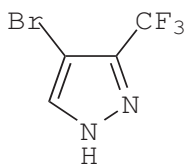

Over the last 50 years, we have built an unparalleled, off-the-shelf collection of building blocks with medically important ring systems, many of which are unique to the Maybridge™ brand. Our primary focus is on heterocyclic chemistry because we believe that such pharmacophore-enhancing molecules are key tools for the drug discovery chemist.

We are regularly introducing new products into our portfolio. Discover a selection of the latest compounds now available in the Maybridge building blocks range.
